Category: **Door system**
Manufacturer: **Zakład Stolarki Budowlanej CAL
SUWAŁKI
Poland**
Product name: **Standard Arctic**

**This certificate was awarded based on the following
criteria for the cool, temperate climate zone**

Comfort $U_D = 0.76 \leq 0.80 \text{ W}/(\text{m}^2 \text{ K})$
 $U_{D,\text{installed}} \leq 0.85 \text{ W}/(\text{m}^2 \text{ K})$
with $U_{\text{door leaf}}^1 = 0.33 \text{ W}/(\text{m}^2 \text{ K})$

Hygiene $f_{Rsi=0.25} \geq 0.70$
Airtightness $Q_{100} = 2.25 \leq 2.25 \text{ m}^3/(\text{h m})$

(Inward opening)

¹U-value of the insulated area of door leaf

Description

Timber doorset (pine, 0,13 W/(mK)) insulated with PIR (Corafoam HPT 35, 0,022 W/(mK); 25% surcharge added to declared value = 0,028 W/(mK)). Sidelights (4/24/4/24/12) and glass door filling (4/27/10/27/10) use $U_g = 0,50 \text{ W}/(\text{m}^2\text{K})$ with SWISSPACER Ultimate and polysulfide secondary seal. The required temperature factor at the locking side is not met, nevertheless, these values are much better than usual. Beyond the requirements, airtightness class 3 according to EN 12207 is achieved.

Explanation

The U-values of the door apply to a combination of door and sidelight with fixed glazing, 2.20 m wide by 2.20 m tall. The door and the sidelight are both 1.10 m wide.

A detailed report of the calculations performed in the context of certification is available from the manufacturer.

Unless stated otherwise, the air tightness was determined according to EN 1026 with respect to the joint length under climate load in conjunction with EN 1121 for the closed, non-locked door. The result corresponds at least to air-tightness class 3 according to EN 12207.

The Passive House Institute has defined international component criteria for seven climate zones. In principle, components which have been certified for climate zones with higher requirements may also be used in climates with less stringent requirements. In a particular climate zone it may make sense to use a component of a higher thermal quality which has been certified for a climate zone with more stringent requirements.

Further information relating to certification can be found on www.passivehouse.com and passipedia.org.

Door with glas section/infill

Glazing/Infill : 1

$$U_p = 0.50 \text{ W}/(\text{m}^2 \text{ K})$$

$$\Psi = 0.039 \text{ W}/(\text{m K})$$

$$f_{Rsi} = 0.79$$

Description:

Glazing (4/27/10/27/10) with $U_g = 0,50 \text{ W}/(\text{m}^2\text{K})$ in accordance with EN 673; Spacer 'SWISSPACER Ultimate' with polysulfide secondary seal.

The comfort criterion limits the use of the infill element as follows:

Maximum area = 0.60 m^2

Maximum circumference = 3.20 m
